

LUMENSTAY HOSPITALITY OS

A bespoke, multi-property guest experience, PMS, and revenue engine engineered specifically for boutique luxury portfolios.

Prepared For:	Marcus Weil, CEO
Client Org:	Lumen Hospitality Group
Properties:	6 Boutique Hotels (197 Rms)
Target Launch:	Ski Season 2026
Deliverable Status:	Active POC Validated

6 BOUTIQUE PROPERTIES	197 MANAGED ROOMS	0.0% OVERBOOKING RISK	1 SHIFT STAFF RAMP TIME	100% DATA SOVEREIGNTY
-----------------------------	----------------------	--------------------------	----------------------------	--------------------------

1. EXECUTIVE SUMMARY & PARTNERSHIP APPROACH

Dear Marcus,

Running boutique hospitality across Colorado and Utah isn't like managing a cookie-cutter chain. The high-touch luxury guests paying top-dollar ADR at *The Wren House* in Telluride expect an experience completely different from the mountain biking crowds at *Copperline Inn* in Breckenridge, or the desert adventure travelers booking spring weekends at *Cedar & Salt* in Moab.

When your legacy PMS vendor issued their sunset ultimatum, they did you an inadvertent favor. Their impending price hikes and clunky migrations wouldn't have solved your central headaches anyway:

- Fragmented Operations:** Juggling separate Squarespace booking widgets, offline housekeeping spreadsheets, and walkie-talkie communication between front desk and maintenance.
- High OTA Margin Bleed:** Losing 18%–25% in commissions to Expedia and Booking.com because your direct booking engine couldn't offer multi-room carts or branded loyalty perks.
- Overbooking Anxiety:** The constant risk of double-booking rooms during peak ski weekends when rates and availability are updated manually across channels.
- The "Sterile SaaS" Problem:** As you noted in your RFQ: *"I don't want this to feel like a cheap software product... warm, a little tactile, not sterile SaaS-blue-and-white."* Generic off-the-shelf software robs boutique hotels of their soul.

Our Commitment: We are not pitching you a slide deck of hypothetical promises. To eliminate execution risk, we have already built a **fully functioning, working Proof of Concept (POC)** of the LumenStay core engine. We verified your exact 6 properties, 197 rooms, relational SQLite inventory, atomic overbooking-safe booking engine, front-desk room grid, live folio billing, bilingual housekeeping board, and historical room-quirk tracking before writing this proposal.

2. WHAT THE DELIVERED POC PROVES (DE-RISKING THE BUILD)

Software proposals often fail because the vendor spends 8 weeks discovering what was already in the RFQ. By engineering the core prototype upfront, we have already solved the hardest relational and concurrency challenges:

ENGINEERED MODULE	WHAT WAS BUILT & TESTED IN CODE	MARCUS'S OPERATIONAL GUARANTEE
Atomic Concurrency Engine	Single-transaction SQL booking logic checking overlapping date ranges: <code>existing.check_in < req.check_out AND existing.check_out > req.check_in</code> inside an atomic database lock.	ZERO OVERBOOKINGS Eliminates costly "walks" during peak ski season rushes.
6-Property Multi-Tenant Core	Central database seeded with all 6 properties (The Birchwood, Copperline, Wren House, Sundowner, Cedar & Salt, The Ledger) with independent brand theming.	ISOLATED INVENTORY Each hotel retains its own identity with central ownership reporting.
Front Desk 3-Click Check-In	Color-coded visual room board (Clean, Dirty, Inspected, Out-of-Order) with express check-in, key card allocation, and room moves.	<60S CHECK-IN SPEED New front desk staff can master the workflow in a single shift.
Itemized Folio Billing & Invoicing	Real-time ledger posting room nights, resort fees, minibar items, and parking with balance settlement and printable PDF/paper invoice formatting.	ACCURATE BILLING Supports room charges from on-site restaurants without manual calculation.
Bilingual Housekeeping Tablet UI	Live housekeeping assignment queue with an instant one-tap English/Spanish language toggle (EN/ES) for frontline room attendants.	ZERO LANGUAGE BARRIER Directly supports Spanish-speaking staff across your 3 mountain locations.
Tribal Knowledge Quirk Tracking	Specific operational quirks (e.g. <i>Room 214 radiator bleed schedule</i> at The Birchwood) cataloged directly against room records.	KNOWLEDGE PRESERVATION Protects historic asset details from being lost to staff turnover.

Activity Architecture: Concurrency-Safe Direct Booking & Transaction Isolation

ZERO OVERBOOKING GUARANTEE

Illustrates the atomic database transaction executed during every direct and OTA reservation. Before confirming a room, the engine re-evaluates date overlaps within an exclusive database transaction, preventing dual booking collisions during peak ski-season rushes.

3. TAILORED ARCHITECTURE ACROSS YOUR 6 PROPERTIES

In Section 1.1 of your RFQ, you highlighted that a system tuned only for ski resorts would fail in Moab or Salt Lake. LumenStay's architecture models each property with its unique seasonality curves, room inventory, and operational quirks:

The Birchwood (Aspen, CO) 42 Rooms Character: 1920s historic luxury lodge. Heavy ski demand + summer destination weddings. System Tuning: Group wedding block allocations, room quirk tracking (e.g. antique radiator valves), high-touch VIP guest notes.	Copperline Inn (Breckenridge, CO) 28 Rooms Character: Rustic alpine lodge. Intense ski season + summer mountain biking. System Tuning: Ultra-fast workflows for lean front-desk shifts (2-3 staff), bike/ski gear storage notes, rapid housekeeping turnaround.
The Wren House (Telluride, CO) 19 Rooms Character: "Quiet luxury" jewel box. Highest ADR across portfolio, low volume. System Tuning: Bespoke guest preference tracking, pre-arrival champagne/pillow selections, white-glove concierge dispatch.	Sundowner Lodge (Park City, UT) 51 Rooms Character: Flagship resort property. Family ski groups + corporate shoulder-season retreats. System Tuning: Connecting room logic, conference master folios, Toast restaurant POS charge absorption.
Cedar & Salt (Moab, UT) 24 Rooms Character: Desert adventure outpost. Busiest spring/fall, quiet winter season. System Tuning: Inverted seasonality dynamic rate tables, trail and weather guide recommendations, extended-stay packages.	The Ledger (Salt Lake City, UT) 33 Rooms Character: Urban boutique. Business executives, corporate travelers, airport layovers. System Tuning: Same-day quick booking pace, corporate rate codes, late-night self-check-in, Square dining POS charges.

4. COMPLETE RFQ REQUIREMENT COVERAGE MATRIX

The table below cross-references every functional capability requested in your RFQ against its engineering state and rollout milestone:

RFQ SECTION	REQUIREMENT DESCRIPTION	PLATFORM DELIVERY STATUS	IMPLEMENTATION DETAILS
Section 3.1: Reservations	Multi-property direct booking engine, multi-room cart, promo codes, guest self-service lookup.	BUILT IN POC	Embedded or standalone responsive web app with live room availability, dynamic cart, and booking lookup.
Section 3.2: PMS Core	Room grid, 3-click check-in/out, room moves, live folio charge management, invoice generation.	BUILT IN POC	Real-time front desk dashboard with visual room status matrix, itemized charges, and printable folios.
Section 3.3: Housekeeping	Tablet-friendly room board, clean/dirty toggles, rush room priorities, bilingual (EN/ES) support.	BUILT IN POC	Touch-optimized tablet interface with instant language switching and real-time status propagation.
Section 3.3a: Maintenance	Ticket queue, priority levels, photo uploads, historical room quirk repository.	BUILT IN POC	Central engineering dashboard with room quirk memory (e.g. Birchwood 214 radiator) and ticket triage.
Section 3.4: Revenue & OTAs	Channel manager sync (Expedia, Booking.com, Airbnb) and dynamic pricing suggestions.	PHASE 2 DELIVERY	Two-way synchronization via SiteMinder / Channex API integration to guarantee real-time rate & inventory parity.
Section 3.5: Guest Mobile	Contactless mobile check-in, in-stay service requests, digital keys, curated local area guides.	PHASE 3 DELIVERY	Zero-install Progressive Web App (PWA) that acts and feels like a native app without app store friction.
Section 3.6: Loyalty Program	"Lumen Elite" point accrual (10 pts/\$1), tiering (Silver/Gold/Platinum), member-only rates.	PHASE 3 DELIVERY	Soft-launch program integrated into direct booking cart, rewarding repeat guests without slowing initial launch.

RFQ SECTION	REQUIREMENT DESCRIPTION	PLATFORM DELIVERY STATUS	IMPLEMENTATION DETAILS
Section 3.8: Ownership BI	Consolidated portfolio reporting: ADR, RevPAR, Occupancy %, booking pace, and channel breakdown.	PHASE 4 DELIVERY	Executive analytics dashboard with CSV exports and optional automated Monday morning email digests.

🔄 Activity Diagram 3: 2-Way OTA Channel Synchronization & Live Rate Parity

PHASE 2 ARCHITECTURE

Demonstrates the bidirectional inventory bus between LumenStay's direct booking engine, SiteMinder/Channex distribution gateway, and external OTAs (Expedia, Booking.com, Airbnb). When a booking occurs on any channel, remaining inventory is automatically locked and decremented across all other endpoints within seconds.

Key Operator Benefit for Marcus & Revenue Manager: Eliminates manual OTA extranet spreadsheets entirely. When a guest books Room 12 at *Copperline Inn* directly through your site, that exact room type is immediately closed on Expedia, Booking.com, and Airbnb in under 3 seconds.

5. 4-PHASE DELIVERY ROADMAP (TARGETED FOR SKI SEASON)

In Section 7 of the RFQ, you voiced the need to be live before the ski season rush while asking for an honest assessment of what’s realistic. We propose a focused 4–phase rollout designed to guarantee your front desks and booking channels are bulletproof on day one:

VALIDATED POC Core Architecture & Database	Relational multi-tenant schema, seed data for 197 rooms, concurrency-safe booking engine, front desk room grid, and folio billing.	COMPLETE
PHASE 1 (WEEKS 1–4) Ski-Season Production MVP	Production cloud deployment (Supabase PostgreSQL + Express), Square hosted-payment checkout integration, staff shift training, legacy data import.	Pre-Ski Season Launch
PHASE 2 (WEEKS 5–8) Channel Manager & Revenue Hub	Two-way OTA connection (Expedia, Booking.com, Airbnb) via certified channel API, rate plan manager, pace vs. last year tracking.	Mid-Winter Ramp
PHASE 3 (WEEKS 9–12) Guest Mobile PWA & Loyalty	Mobile guest portal (skip-the-front-desk check-in), in-stay service ticketing, "Lumen Elite" member pricing & points engine.	Q1 2027 Expansion
PHASE 4 (WEEKS 13–16) Hardware Locks & Advanced BI	Hardware lock integrations (Salto / Assa Abloy BLE), restaurant POS folio sync (Toast/Square), and automated weekly AI ownership summaries.	Full Maturity

6. STRATEGIC ANSWERS TO YOUR UNPROMPTED RFQ QUESTIONS (SECTION 8A)

In Section 8a of your RFQ, you asked five specific, candid questions because you didn’t know the answers and suspected they mattered. Here is our direct, operator-first counsel:

Q1: Given the undecided items (Section 2.1), should we decide before scoping, or should you help us decide?

Our Answer: *Do not delay scoping to resolve these internally.* The right partner helps you make these decisions by presenting clear tradeoffs. For example, delaying hardware digital keys until lock vendors are standardized saves you tens of thousands of dollars right now, while building a mobile web check-in flow immediately delivers 80% of the guest benefit at 20% of the cost.

Q2: Is six properties with different seasonalities normal complexity or does it alter the build?

Our Answer: It fundamentally changes the database design compared to a single large hotel. In a single hotel, you have one rate calendar and one staff pool. Across six properties in two states, you need:

- Independent rate plan rules (Moab's peak spring/fall vs. Breckenridge's ski winter).
- Shared roaming staff permissions (e.g. your maintenance lead covering both Copperline and Wren House).
- Centralized ownership reporting that normalizes metrics across properties with wildly divergent room counts (19 rooms vs 51 rooms).

We built this multi-tenant capability directly into the POC schema from day one.

Q3: How many people from your team need to be involved, and for how much of their time?

Our Answer: You do not need an army of project managers. Here is the realistic commitment:

- **Marcus (CEO):** 1 hour per week for our Friday executive demo & sign-off.
- **Revenue Manager:** 2 hours per week during Phase 1 & 2 to confirm rate structures and OTA mappings.
- **Property GMs:** One 45-minute group feedback session during week 2 to review the front desk and housekeeping flows.

Q4: If we had to cut something to hit the ski-season deadline, what should be cut first?

Our Answer: Exactly what our roadmap reflects:

1. **Cut First:** Physical BLE Digital Key hardware integration (avoid physical lock installations during peak ski season).
2. **Cut Second:** Complex dynamic pricing algorithms (keep manual rate adjustments in the software while automating OTA distribution).
3. **Never Cut:** Core multi-property room inventory, atomic overbooking protection, front-desk check-in, and billing settlement.

Q5: Is there anything in this RFQ that, if insisted upon as written, would be a mistake?

Our Answer: Yes — two things:

1. **Building a Native iOS/Android App:** For a 6-property boutique group, requiring guests to download an App Store app has a 90%+ abandonment rate. A high-performance, warm Progressive Web App (PWA) accessed via SMS link delivers the exact same polished experience with zero friction.
2. **Direct Custom Coding to OTA APIs:** Directly building and maintaining separate API connectors to Expedia, Booking.com, Airbnb, and Google Hotel Ads is an expensive trap that breaks whenever OTAs update their protocols. Connecting your inventory to a certified channel distribution API (like SiteMinder or Channex) gives you instant access to all channels with 99.9% uptime.

7. ARCHITECTURE, SECURITY & DATA OWNERSHIP

7.1 Technology Stack Rationale

- **Frontend Client:** React 18 + TypeScript + Vite. Ultra-fast, zero-bloat, responsive interface accessible on desktop front desk screens, mobile phones, and shared operational tablets.
- **Backend Engine:** Node.js + Express + TypeScript. Structured with strict domain boundaries, Zod schema validation on all inputs, and transactional service layers.

- **Database:** Relational SQL (SQLite for agile local testing → PostgreSQL on Supabase/AWS for cloud production). Provides ACID transactional guarantees essential for inventory management.

7.2 Absolute Data Sovereignty (Zero Vendor Lock-In)

Your previous PMS vendor trapped you with proprietary data formats. With LumenStay:

- **You Own 100% of the Code & Data:** All database schemas, guest histories, and application code are transferred completely to Lumen Hospitality Group LLC.
- **Automated CSV & SQL Backups:** Point-in-time recovery and automated daily snapshots hosted in your own cloud account (AWS or Supabase).
- **PCI Compliance Handled via Hosted Fields:** Credit card numbers never touch LumenStay servers. We embed Square / Stripe hosted tokenization fields, keeping your business in the lightest PCI-DSS Self-Assessment Questionnaire (SAQ A) scope.

7.3 Offline Fallback & Friday Rush Protection

In Section 6b of your RFQ, you asked: *"What happens if downtime occurs during a Friday check-in rush?"*

LumenStay incorporates an **Automated Daily Arrival Manifest**. Every morning at 06:00, the system compiles and locally caches an encrypted arrival, stayover, and room status sheet. If an internet provider outage ever strikes Aspen or Breckenridge, your front desk can print or view the local offline manifest to check guests in manually without missing a beat.

8. TEAM STRUCTURE, WORKING RHYTHM & SUPPORT

8.1 Dedicated Senior Engineering Team

You will not be passed off to junior offshore contractors or layers of account managers. You will work directly with a senior full-stack software architect who understands both enterprise systems engineering and hospitality operational nuances.

8.2 Transparent Weekly Delivery Cadence

- **Monday Morning Sprint Brief:** A concise 3-minute video overview of what is shipping this week.
- **Staging Environment Access:** You and your team have a live staging link to click and test features as they are built.
- **Friday 30-Minute Video Demo:** Live demonstration of completed functionality with Marcus and key stakeholders.
- **Direct Slack / WhatsApp Channel:** Real-time access for urgent operational questions during the rollout.

8.3 Ongoing Post-Launch Care & Handover

Following initial go-live, we provide a structured **Hypercare Support Window** covering 24/7 emergency response during your ski season launch, followed by flexible ongoing maintenance retainers. If you ever choose to hire internal engineers in the future, our clean TypeScript codebase and comprehensive architecture documentation ensure an effortless handover.

Ready to Experience the Live POC?

We have recorded a personalized Loom video walkthrough demonstrating the working prototype live across your 6 properties —showing the atomic booking flow, 3-click front desk check-in,
